 - Research:** In progress
 - Generate:** In progress
 - Review:** Pending
 - Publish:** Pending
- Activity Feed:** A list of recent events:
 - AI Visibility Scan completed (Acme Studios, 2h ago)
 - SEO Article published (CIFRA Project, 6h ago)
 - Gap Report delivered (Nordic Retail, 1d ago)

How the delivery model works.

Your team keeps the client-facing workflow, product, or internal operating surface.
Citedy powers the production layer behind it.

One full Citedy workspace for your team

Centralize operations and access. Scale without multiplying environments.

One project or product context per use case

Keep data, prompts, assets, and history clean to improve quality and consistency.

One API key across the same generation stack

Consistent tools, data, and performance at any scale.

Your approvals, distribution, and business logic remain in your product

You own the relationship. We power the delivery layer.

Everything needed is already live ,

Teams plug into an existing production system, not a future roadmap promise.

01 Workspace
Everything your team needs—already set up and production-ready.

Workspace Overview

- Active
-
-
-

02 Auth
Secure API access for people, agents, and automations.

Authorization

Authorization **Bearer**

`citedy_agent_secret`

03 MCP
Connect once. Get tools, resources, and prompts.

MCP Endpoint

`mcp.citedy.com/mcp`

● Live SSE JSON

04 REST
Clean, versioned API built for production.

Business plan, volume discounts

Credits are consumed per operation. Volume commitments and additional discount tiers can be structured for higher-throughput teams.

Predictable pricing

Volume discounts

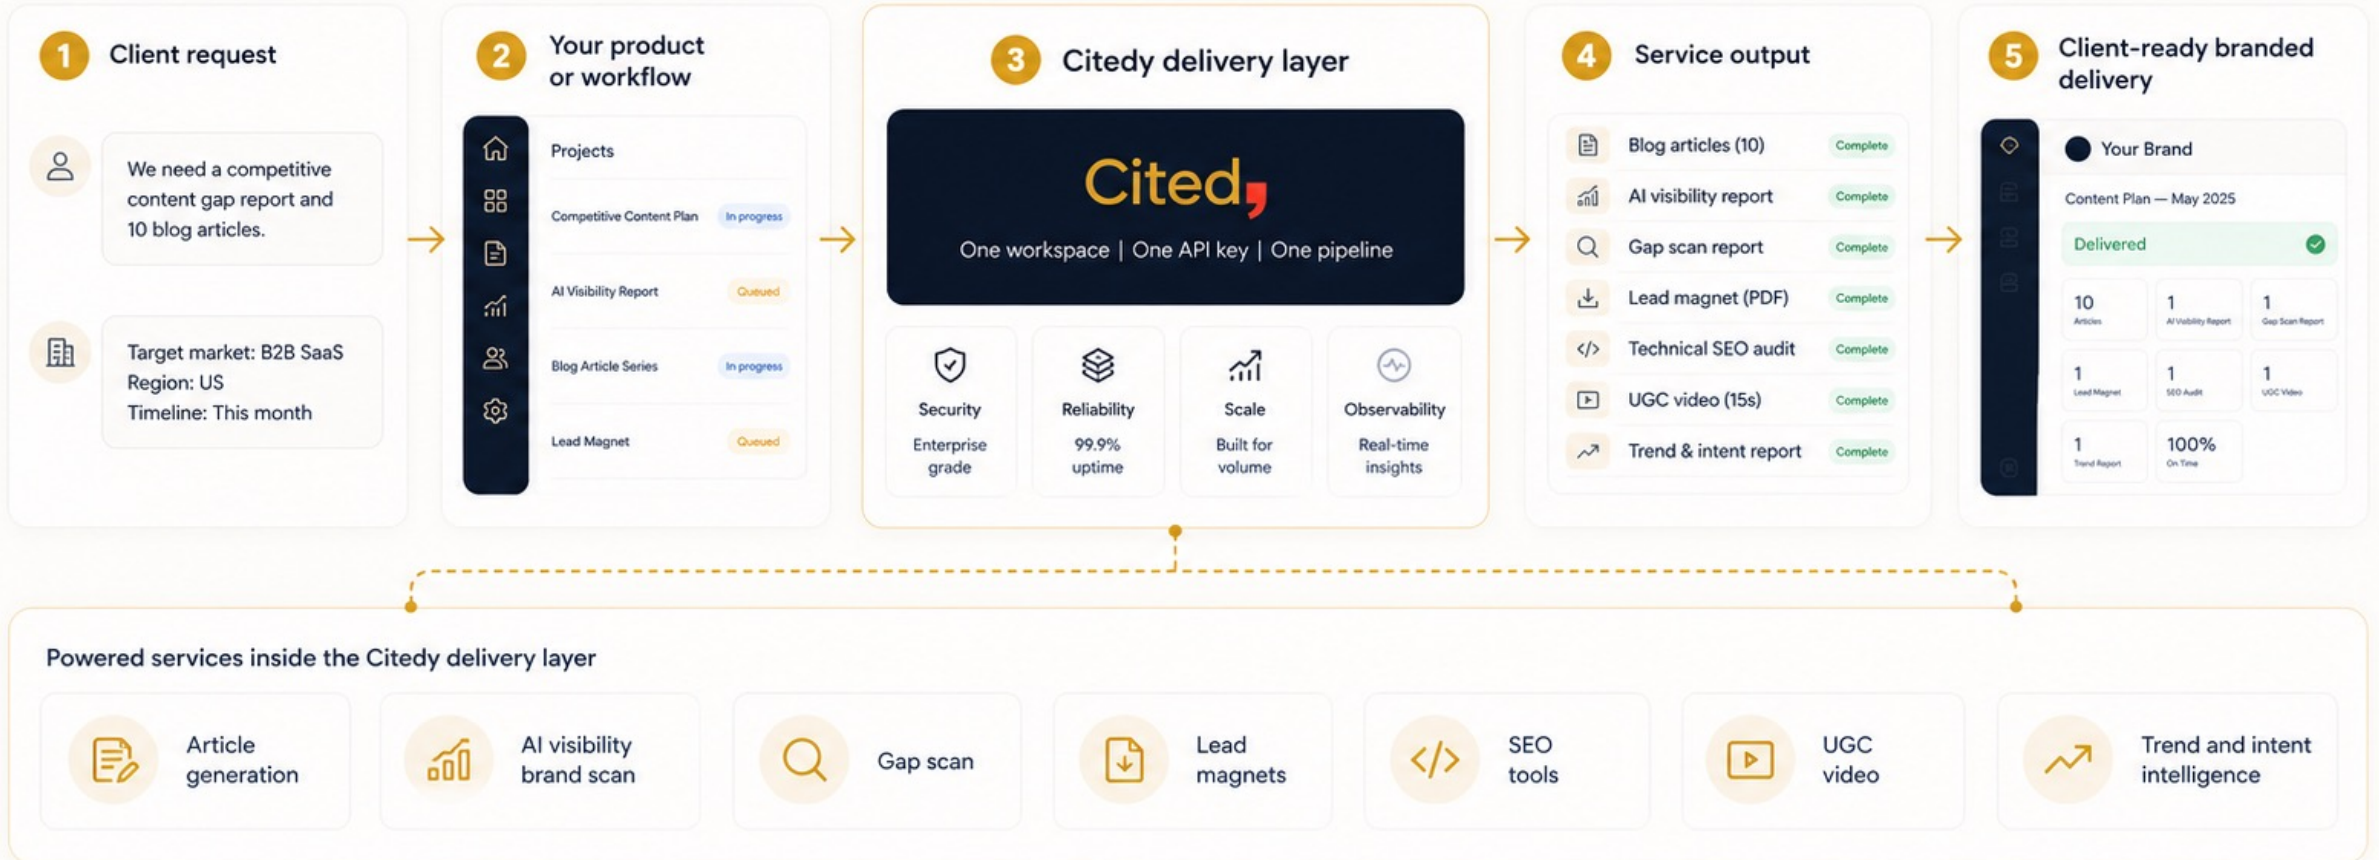

Enterprise-grade reliability

Built for teams at scale

One delivery layer, multiple client outcomes.

Citedy powers the production system behind articles, audits, scans, assets, and video while **your team owns the experience.**

Use one infrastructure layer to deliver different services without rebuilding the stack for each request.

One plan, higher committed volume,

Business usage scales from self-serve to higher-throughput committed volume.

1. Business subscription

Access to Citedy Business.
Usage-based pricing, billed monthly.

- ✓ All Business features included
- ✓ AI Agents, Autopilot, and full platform
- ✓ Pay for what you use
- ✓ Cancel anytime

Built to grow with your product,
team, and client demand.

2. 500,000 credits / month commitment

20% additional discount
from 500k credits / month

Same Business model,
higher volume, better economics.

- ✓ Usage-based pricing, billed monthly
- ✓ Volume discounts apply automatically
- ✓ Scale usage as needed within commitment
- ✓ Top-up available at published rates

3. 1,000,000 credits / month commitment

30% additional discount
from 1M credits / month

Same Business model,
maximum volume advantage.

- ✓ Usage-based pricing, billed monthly
- ✓ Volume discounts apply automatically
- ✓ Scale usage as needed within commitment
- ✓ Top-up available at published rates

Built on usage-based infrastructure pricing.

Transparent, predictable,
and designed for scale.

For growing teams and higher-throughput delivery.

From self-serve to enterprise workloads.

Committed volume rewards growth.

The more you deliver,
the more you save.

Final stacking and top-up rules

confirmed in the quote
and order form.

Ready for production operations.

The integration model is simple. The delivery model is **already production-safe**.

01 Status and readiness checks

- ✓ Verify API connectivity and auth
- ✓ Check credits balance
- ✓ Validate social accounts and posting access
- ✓ Confirm knowledge sources are accessible
- ✓ Scan blocker URLs and availability

02 Credits and billing

- ✓ Detect insufficient credits before jobs start
- ✓ Auto-pause with clear reason and next step
- ✓ Offer top-up in one click or request invoice
- ✓ Resume automatically after payment or top-up

03 Rate limits

- ✓ Respect `retry_after` and `rate-limit` headers
- ✓ Exponential backoff with jitter
- ✓ Queue and retry safely without duplication
- ✓ Surface status, not just failures

04 Security

- ✓ Rotate keys if exposed
- ✓ Store secrets securely
- ✓ Never commit secrets or tokens
- ✓ Principle of least privilege for all integrations

MCP client configuration

Conceptual setup for Citedy MCP

Secure endpoint

🔒 `https://mcp.citedy.com` ✓

TLS 1.2+ • Encrypted in transit

Authentication

🔒 Bearer ✓

Scoped key • Stored securely

Tool surface

`citedy.run` ✓

One tool entry point • All capabilities

Production-safe by design

Secure, observable, and resilient

Launch branded client deliverables *without* building the production stack,

Citedy provides the infrastructure. Your team keeps the client relationship, front-end experience, approvals, and monetization.

1 Keep your portal or workflow

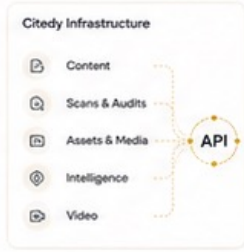

Your team keeps the UI, client experience, approvals, and monetization. We stay behind the scenes.

✓ Your brand ✓ Your domain ✓ Your clients ✓ Your pricing

2 Deliver through one API-driven infrastructure

One API and MCP layer powers content, insight, audit, asset, intelligence, and video outputs at scale.

✓ Agent API ✓ MCP ✓ Versioned ✓ Secure

3 Scale with one workspace and committed volume pricing

Predictable pricing with volume discounts. Scale output without rebuilding, retooling, or adding headcount.

Committed Volume	
Starter	1K - 5K credits/mo
Growth	5K - 50K credits/mo
Scale	50K - 250K credits/mo
Enterprise	250K+ credits/mo

✓ Volume discounts ✓ No overages ✓ Cancel anytime ✓ Transparent

Agent API and MCP already live

Production-ready endpoints and tools you can use today.

Multiple service lines already supported

Content, audits, scans, assets, intelligence, and video.

Billing and discount logic already defined

Committed volume tiers and predictable margins.

Separate technical delivery documents

Detailed integration, API flow, and rollout guides per service.

We power the infrastructure. **You package the service.** Your clients see your brand, not the backend.
